LANSING COMMUNITY COLLEGE

ASSOCIATE OF APPLIED SCIENCE
IN CONSTRUCTION MANAGEMENT

QUALITY IMPROVEMENT PLAN
Quality Improvement Plan (QIP) for the Construction Management Program at Lansing Community College

This QIP will be the basis for continuous improvement of the Associate of Applied Science in Construction Management degree.

The Quality Improvement Plan has three major components:

1. Strategic Plan
2. Assessment Plan
3. Assessment Implementation Plan
CONSTRUCTION MANAGEMENT PROGRAM
STRATEGIC PLAN

Our Mission
The Construction Management Program at Lansing Community College is dedicated to providing all students interested in the study of construction with the academic means to achieve their individual goals. To achieve this mission, the program will structure all curricula, courses, events, and activities as part of an instructive learning environment, designed and implemented by field trained professionals, using the latest techniques and technologies available. The Construction Management Program will continually seek direction and guidance from a board of advisors who represent a diverse cross section of practicing professionals throughout the architectural, engineering and construction industry.

The program is committed to developing construction management professionals of the future; are trained in the art of leading the architectural, engineering and construction community to build high quality, safe and desirable buildings. With the ability to lead these teams in an integrated fashion, our graduates will exude the abilities of planning, problem solving, cost estimating, scheduling, supervision, and commissioning.

Our graduates enter the construction industry in various positions with the ability to lead, problem solve and use innovative applications on their projects. With the hands-on experience in several complex building systems including: Electrical and Mechanical, they can provide valuable services immediately.

The Construction Management Program is designed to prepare students to work in entry-level supervisory and management positions related to construction, including site supervisors, construction and project superintendents, field supervisors, project engineers, and estimating/scheduling assistants. Construction management professionals plan, direct, or coordinate activities related to the construction and maintenance of buildings and infrastructure. They participate as members of an integrated project team in the conceptual development of a construction project and oversee its organization, scheduling, budgeting, and implementation. This curriculum incorporates elements of the Associate Constructor Level I examination body of knowledge as established by the American Institute of Construction. The curriculum provides graduates with a broad foundation of technical and management abilities with an emphasis on job entry skill development, estimating, scheduling, project management, and specialized technical skills related to one of four construction focus areas (building, heavy/civil, electrical/construction, and HVAC/mechanical construction).

The department has developed a number of specific goals for the next five years; these goals are broken down into the areas of Curriculum, Students, Faculty, Facilities, Industry and Alumni Relations. The specific goals are listed below:
Curriculum
- Review curriculum with program faculty at the completion of each semester
- Increase role of IAB for curriculum review
- Identify and develop more Open Learning Resources to use in courses
- Annual review of D2L course layout and content
- Create and implement a graduate exit interview survey to be implemented to measure and track the indirect assessment of the Student Learning Outcomes

Students
- Further diversify the students in our program. Specifically focusing on traditionally underrepresented student groups, such as females and minorities.
- Increase the number of program completers
- Encourage students to participate in construction related competitions to expand their firsthand learning.
- Continue to develop and improve the Construction Club Student Organization

Faculty
- Increase the number of faculty to meet goals for class sizes and offerings as necessary
- Enhance the effectiveness of faculty by encouraging and supporting professional development in technical areas as well as teaching, through seminars and CTE resources.
- Meet with faculty as a group prior to Fall and Spring semesters to review upcoming semester classes, goals and receive curriculum feedback from faculty

Facilities
- Upgrade or increase lab facilities to meet the growing number of students.
- Evaluate, implement, and update technology to keep pace with industry.

Industry Relations
- Increase industry awareness of the CM program
- Add current students and alumni to the Industry Advisory Board
- Formalize Industry Advisory Board Fundraising opportunities

Alumni Relations
- Create a LCC Construction Management Alumni Association
- Develop a system to track alumni
The Construction Management programs learning outcomes align with the American Council for Construction Education’s (ACCE) thirteen Student Learning Outcomes (SLOs) listed below. Upon graduation our students shall be able to:

1. Apply effective communication, both orally and in writing.
2. Apply the skills to estimate quantities and costs for the bidding process in a construction project.
3. Apply the aptitude to schedule a basic construction project.
4. Apply current technology related to the construction process.
5. Apply the interpretation of construction documents (contract, specifications, and drawings) used in managing a construction project.
6. Apply basic principles of construction accounting.
7. Apply basic surveying techniques used in building layout.
8. Understand the basic principles of ethics in the construction industry.
9. Understand the fundamentals of contracts, codes, and regulations that govern a construction project.
10. Understand basic construction methods, materials, and equipment.
11. Understand basic safety hazards on a construction site and standard prevention methods.
12. Understand the basic principles of structural design.
13. Understand the basic principles of mechanical, electrical, and piping systems.

The following tables list the specifics of the assessment tools that were used and the performance criteria to measure the achievement of the student learning outcome. Following each table is the expected performance criteria, analysis of the assessment and performance, discussion of the assessment and required improvement of the assessment.
Student Learning Outcome 1

*Apply effective communication, both orally and in writing*

<table>
<thead>
<tr>
<th>Course</th>
<th>Semester</th>

**Discussion:** In the future if this direct assessment is used the student performance must be improved and we must document a current 3-year average of this assessment showing its improvement.

**Improvement:** Starting Spring 2021 - Implementation of an Indirect Assessment with the use of an Exit Interview Survey Question will be implemented and documented.

Q13: I feel I understand the basic principles of mechanical, electrical, and piping systems.

The purpose of the Assessment Implementation Plan is to have a well-documented process for assessing and evaluating each of the Student Learning Outcomes using the assessment tools indicated in the Assessment Plan. The Assessment Implementation Plan is used to make changes to support the continuous improvement to achieve high program and student achievement relative to college and program mission and goals.

Each SLO will be evaluated with at least one direct and one indirect assessment tool. The results will be evaluated annually by the Curriculum Guidance Committee. The Curriculum Guidance Committee is a subcommittee of the Industry Advisory Board and is made up of industry partners, current program faculty, current program students and student alumni. The Curriculum Guidance Committee will meet twice a year, prior to the scheduled Industry Advisory Board meetings, at which time they will review and assess 2 to 3 of the Student Learning Outcomes. The Curriculum Guidance Committee determine if all of the performance criteria have been met. If any performance criteria have not been met, the committee will determine what steps, actions or changes are required. After each bi-annual meeting the subcommittee will report to the Industry Advisory Board their findings and the corrective action that is to be taken if necessary.

The Student Learning Outcome Direct Assessments tool will be a whole or part of an assignment or examination that is part of a course grade. Direct assessments of student work have appropriate rubrics, answer keys, or score sheets to standardize and explain how the score/grade is determined. The Direct Assessments will be documented at the end of each semester that the course is held. The minimum performance criteria for each direct assessment shall be at least 80% of the CM students earn a 2.0 (71% - 75%) or better. The Analysis of the Performance Criteria will be reflective of a 3-year period and updated each year.

A survey given to graduating students will serve as the indirect assessment measures for the 13 Student Learning Outcomes. The minimum performance criteria for each indirect assessment shall be a 3.5 on a 1 to 5 scale. Surveys for indirect assessments are anonymous and are created, distributed, and collected online using Google Forms. These surveys will be documented and kept up to date for a 3-year cycle starting in the Spring of 2021.
